

42390P11802

PATENT

CLAIM AMENDMENTS**1. (Currently amended) A system, comprising:**

a plurality of agents capable of receiving and sending formatted information via a network, the formatted information organized according to a pre-defined syntax; and

a priority rule-based coalescing mechanism connecting to the plurality of agents via the network, the priority rule-based coalescing mechanism capable of coalescing the formatted information received from the plurality of agents, the pre-defined syntax of the formatted information being recognized by the plurality of agents and the priority rule-based coalescing mechanism, the priority rule-based coalescing mechanism further coalescing the formatted information within a coalesced file and synchronizing the coalesced file according to corresponding priority rules defined with respect to each of the plurality of agents, the synchronized coalesced file then being processed to generate an updated coalesced file.

2. (Previously presented) The system according to claim 1, wherein each of the agent is associated with a device group that comprises at least one device and collects information from the at least one device in the device group.

3. (Previously presented) The system according to claim 2, wherein each of the plurality of agents comprises:

a device interface for interacting with the at least one device in the device group to collect information;

an information formatting mechanism for organizing the information, collected by the device interface from the at least one device, according to the pre-defined syntax to generate the formatted information; and

a network communication mechanism for communicating with the priority rule-based coalescing mechanism, sending the formatted information to the priority rule-based coalescing mechanism via the network.

42390P11802

PATENT

4. (Currently amended) A priority rule-based coalescing mechanism, comprising:
a network communication mechanism for receiving formatted information from an agent, the formatted information generated according to a pre-defined syntax;
a priority rule database for storing priority rules defined with respect to the agent; and
a coalescing mechanism for coalescing and synchronizing the formatted information in a coalesced file according to the priority rules retrieved from the priority rule database, the pre-defined syntax of the formatted information being recognized by ~~the plurality of the agents~~ and the coalescing mechanism, the coalescing mechanism further capable of generating an updated coalesced file.
5. (Original) The mechanism according to claim 4, further comprising:
a priority rule set-up mechanism for setting up the priority rules for the agent, the priority rules defining the priority of the agent;
a priority rule accessing mechanism for retrieving the priority rules, from the priority rule database after the formatted information is received from the agent, to provide associated priority rules to the coalescing mechanism to coalesce the formatted information.
6. (Previously presented) The mechanism according to claim 5, further comprising:
a coalesced file initialization mechanism for initializing the coalesced file to which the agent appends formatted information;
a parsing mechanism for parsing the priority rules, retrieved by the priority rule access mechanism from the priority rule database, before the coalescing mechanism coalesces the formatted information;
a transformation mechanism for transforming the formatted information, before the formatted information is coalesced by the coalescing mechanism, according to the priority rules; and
a coalesced file database for storing the updated coalesced file, generated by the coalescing mechanism.

42390P11802

PATENT

7. (Previously presented) A method, comprising:
- sending, by a priority rule-based coalescing mechanism, an inquiry to an agent to gather information from a device group associated with the agent;
 - collecting, by the agent, the information from the device group according to the inquiry;
 - constructing formatted information based on the information obtained from the device group according to a pre-defined syntax;
 - sending the formatted information to the priority rule-based coalescing mechanism;
 - retrieving, by the priority rule-based coalescing mechanism, priority rules associated with the agent from a priority rule database; and
 - coalescing the formatted information based on the priority rules to generate an updated coalesced file.
8. (Original) The method according to claim 7, wherein the sending an inquiry includes sending the inquiry with a coalesced file.
9. (Currently amended) The method according to claim 8, wherein the sending the formatted information comprises:
- appending the formatted information, generated by the constructing, to the coalesced file; and
 - sending the coalesced file, appended with the formatted information, to the priority rule-based coalescing mechanism.
10. (Original) The method according to claim 7, wherein the constructing according to a pre-defined syntax includes constructing according to XML.
11. (Currently amended) A method for a priority rule-based coalescing mechanism, comprising:
- sending an inquiry to an agent to gather information from a device group associated with the agent;

42390P11802

PATENT

receiving formatted information from the agent, formatted information being constructed according to a pre-defined syntax;
retrieving priority rules associated with the agent from a priority rule database; and
coalescing the formatted information based on the priority rules to generate an updated coalesced file.

12. (Original) The method according to claim 11, wherein the sending an inquiry includes sending the inquiry with a coalesced file.

13. (Original) The method according to claim 12, wherein the receiving the formatted information includes receiving the formatted information with the coalesced file wherein the formatted information is appended.

14. (Original) A method, comprising:

receiving, by an agent associating with a device group that comprises at least one device, information from a device of the at least one device;
constructing formatted information based on the information received from the device according to a pre-defined syntax;
sending the formatted information to a priority rule-based coalescing mechanism;
retrieving, by the priority rule-based coalescing mechanism, priority rules associated with the agent from a priority rule database; and
coalescing the formatted information based on the priority rules to generate an update coalesced file.

15. (Original) The method according to claim 14, wherein the coalescing the formatted information comprises:

coalescing the formatted information with respect to a coalesced file according to the priority rules; and
generating the updated coalesced file based on the result from the coalescing.

42390P11802

PATENT

16. (Original) The method according to claim 14, further comprising:
setting up the priority rules associated with the agent prior to the retrieving; and
transforming the formatted information prior to the coalescing formatted information
according to the priority rules.
17. (Previously presented) A method for a priority rule-based coalescing mechanism,
comprising:
receiving formatted information from an agent associated with a device group
comprising at least one device, formatted information being constructed based on
the information, obtained from a device of the at least one device, according to a
pre-defined syntax;
retrieving priority rules associated with the agent from a priority rule database; and
coalescing the formatted information based on the priority rules to generate an
updated coalesced file.
18. (Original) The method according to claim 17, wherein the coalescing the formatted
information comprises:
coalescing the formatted information with respect to a coalesced file according to the
priority rules; and
generating the updated coalesced file based on the result from the coalescing.
19. (Previously presented) The method according to claim 17, further comprising:
setting up the priority rules associated with the agent prior to the retrieving; and
transforming the formatted information prior to the coalescing according to the
priority rules associated with the agent.
20. (Previously presented) A computer-readable medium encoded with a program, the
program, when executed causing:
sending, by a priority rule-based coalescing mechanism, an inquiry to an agent to
gather information from a device group associated with the agent;

42390P11802

PATENT

collecting, by the agent, the information from the device group according to the inquiry;
constructing formatted information based on the information obtained from the device group according to a pre-defined syntax;
sending the formatted information to the priority rule-based coalescing mechanism;
retrieving, by the priority rule-based coalescing mechanism, priority rules associated with the agent from a priority rule database; and
coalescing the formatted information based on the priority rules to generate an updated coalesced file.

21. (Previously presented) The medium according to claim 20, wherein the sending of the formatted information comprises:

appending the formatted information, generated by the constructing, to a coalesced file that is received together with the inquiry; and
sending the coalesced file, appended with the formatted information, to the priority rule-based coalescing mechanism.

22. (Previously presented) A computer-readable medium encoded with a program for a priority rule-based coalescing mechanism, the program, when executed causing:

sending an inquiry to an agent to gather information from a device group associated with the agent;
receiving formatted information from the agent, formatted information being constructed according to a pre-defined syntax;
retrieving priority rules associated with the agent from a priority rule database; and
coalescing the formatted information based on the priority rules to generate an updated coalesced file.

23. (Original) The medium according to claim 22, wherein

the sending an inquiry includes sending the inquiry with a coalesced file;
the receiving the formatted information includes receiving the formatted information with the coalesced file wherein the formatted information is appended.

42390P11802

PATENT

24. (Original) A computer-readable medium encoded with a program, the program, when executed, causing:

- receiving, by an agent associating with a device group that comprises at least one device, information from a device of the at least one device;
- constructing formatted information based on the information received from the device according to a pre-defined syntax;
- sending the formatted information to a priority rule-based coalescing mechanism;
- retrieving, by the priority rule-based coalescing mechanism, priority rules associated with the agent from a priority rule database; and
- coalescing the formatted information based on the priority rules to generate an updated coalesced file.

25. (Original) The medium according to claim 24, further comprising code, which when executed causes:

- setting up the priority rules associated with the agent prior to the retrieving; and
- transforming the formatted information prior to the coalescing formatted information according to the priority rules.

26. (Previously presented) A computer-readable medium encoded with a program for a priority rule-based coalescing mechanism, the program, when executed, causing:

- receiving formatted information from an agent associated with a device group comprising at least one device, formatted information being constructed based on the information, obtained from a device of the at least one device, according to a pre-defined syntax;
- retrieving priority rules associated with the agent from a priority rule database; and
- coalescing the formatted information based on the priority rules to generate an updated coalesced file.

42390P11802

PATENT

27. (Previously presented) The medium according to claim 26, further comprising code, which when executed causes:

setting up the priority rules associated with the agent prior to the retrieving; and transforming the formatted information prior to the coalescing according to the priority rules associated with the agent.
